

Sunrise Report for Conway, AR During 2024

Hadyn Cole W.

April 29, 2025

Abstract

This paper analyzes the collection of times of each sunrise during the year 2024 in the town of Conway Arkansas. With this data we can compare the average sunrise of each month during that year. Doing this gives us a better understanding of the world we live in.

1 Introduction

Each year data is collected on sunrise times for a variety of reasons such as weather forecasting, researching solar events, and for agriculture welfare. This simple project used the data for the sunrise of each day in Conway, Arkansas during the year 2024. The goal of this project is to detail how the data was collected, corrected, and analyzed to find the average sunrise times of each month using python code.

2 Analysis

2.1 Data Collection

Data was collected from the website timeanddate.com, which tracks the amount of daylight each day all over the country. Sunrise times were logged in a .csv file in columns for each month. They were logged as strings in the format of hh:mm, for hours and minutes.

Before analysis could begin, data found through (timeanddate.com, 2024) had to be processed before finding the averages of each month could be found. All values of interest represented as strings had to be converted into integers. This was done by using python code to separate each the string by the colon use in the values collected for times. From there the minutes had to be converted to a decimal of the hour, and recombined with the hour

the minute are in. With that the data was now able to be analyzed to find the average sunrise time of each month.

2.2 Data Analysis

With sunrises times from all 365 days in 2024 available the averages of each month were taken. This was done using the general formula for calculate mean.

$$\text{Average} = \frac{\text{Sum of sunrise times in the month}}{\text{Numer of days in the month}} \quad (1)$$

Once this was done for each month the twelve calculated averages were plotted on a graph with months over 1.

Figure 1: Graph of the sunrise averages for each month in the year 2024

3 Conclusion

3.1 Results

From the graph 1 there is a noticeable dip that appears in the middle of the year. This is due to the rolling back an hour that is done around the United States for daylight savings.
